

Bitcoin Market Sentiment vs Trader Performance Analysis

Objective

Analyze the relationship between Bitcoin market sentiment (Fear & Greed Index) and trader performance using Hyperliquid historical trading data. The goal is to identify patterns that can help improve trading strategies and risk management.

Methodology

1. Loaded and cleaned both datasets.
2. Converted date fields into a common format.
3. Merged trader data with sentiment data using trading dates.
4. Analyzed Closed PnL across sentiment categories.
5. Performed trader segmentation and clustering.
6. Generated visualizations to compare performance across market conditions.

Key Findings

Replace this section with findings from your notebook results and charts. Examples:

- Average trader profitability during Fear vs Greed periods.
- Sentiment category with the highest mean Closed PnL.
- Differences between top and bottom traders.
- Impact of leverage during different market sentiments.
- Any statistically significant observations discovered during analysis.

Recommendations

Replace with recommendations supported by your analysis. Examples:

- Increase caution during sentiment regimes associated with losses.
- Monitor leverage usage during highly emotional market phases.
- Develop sentiment-aware trading strategies.
- Use historical sentiment trends as an additional risk indicator.
